

Neolase

Subcontracting

Laser marking used to be reserved to elite industries because of its cost. Today it is democratized and used in many different industries, thanks to the invention of fiber lasers.

Sometimes the laser marks are visible (car dashboards, branding, etc) sometimes they are intended to be difficult to see (for traceability / anti-counterfeiting measures for example)

Laser marking is present in many aspect of our day to day lives, sometimes we don't even realise it !

 Anti-counterfeiting
 Graduations
 Legal mark
 etc.

There are no good or bad choice, you simply choose a marking procedure that best suits the way you work, your products and that achieves what your customers want.

Using a sub-contractor to mark your products can result in the following advantages for your company :

- Your costs are under control (no investments, operating costs, no R&D / maintenance / safety costs, etc)
- Laser marking is invoiced only on a pay per mark basis
- Increased competencies
- You have access to laser technologies
- You concentrate on your core business while you improve your company revenues

THE BOTTOM LINE : YOU CAN SAVE TIME AND MONEY BY SUBCONTRACTING.
